# #3 - Structural Tension

## **Age 21 – Graduation (Intermediate End Result #1)**

I have made the 1st level decision – which career path to pursue. I have made the 2nd level decisions

### **Objectives to get from Current Reality to Intermediate End Result #1**

- Continue to build resume through student activities
- Graduate with at least a 3.0 GPA (currently 2.95)
- **Make the career path decision**
- **2nd Level Implementation**

## **Age 20 – Summer before Senior Year**

I will be a senior, majoring in Electrical Engineering I see myself in a leadership role when I am 30. But I do not know which career path to follow.

# Begin at End Insights

## Be Your Best

I am thinking of three different career paths so this is a little hard to do:  
Technical: I am **good at math & science**; Business: it is **hard to say**; Legal: I see **lawyers having a lot in common with engineers**.

## Meaning & Passion

On the career front this exercise didn't identify anything that had meaning or anything I was passionate about. Doubt my passion for engineering. On the personal front it identified my **passion for living in California**.

## Fuel Economic Engine

I know that **living in California will be much more expensive** than staying in the Midwest. **Living by the beach** is also more expensive. Taste for **international travel** will also increase my spending level.

## Right Opportunity

Technical: start as an engineer & see where that leads; Business: go into a Management Development Program; Legal: be some form of corporate lawyer, probably not a District Attorney

What I don't want to be: **I have minor practical skills and should not pursue a trade**.
